1 Introduction. PERMANOVA is an acronym for “permutational multivariate analysis of variance” 1.It is best described as a geometric partitioning of multivariate variation in the space of a chosen dissimilarity measure according to a given ANOVA design, with p-values obtained using appropriate distribution-free permutation techniques (see Permutation Based Inference; Linear Models ...

The best implementations were applied to realworld data sets of some major Swiss cattle populations. Traits of interest were multiple birth, early-life calf survival and carcass con rmation scores. GLMMs and threshold models clearly improved the prediction of breeding values compared to LMMs when applied to simulated binary and ordinal traits.
